Special collections

Dominican Republic

Adaptive Agricultural Research Project, 1981-1985

(including a printed guide)

64 reports and papers

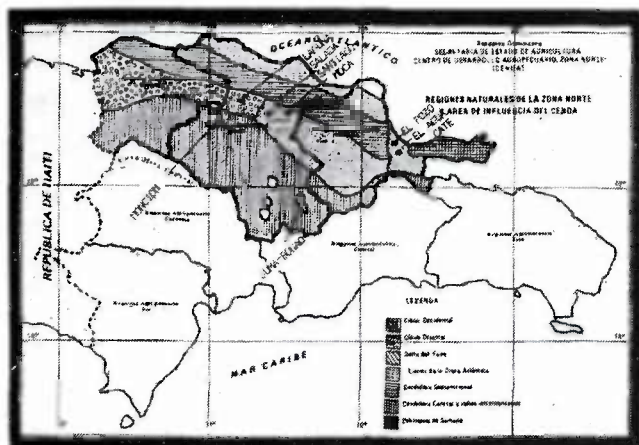

37 microfiches (positive silver halide)

Order number. KD-3420/1

Between 1981 and 1985, the Adaptive Agricultural Research Project was carried out in the Dominican Republic by the Agricultural University of Wageningen, sponsored by the Netherlands Ministry for Development Cooperation.

The objective of the project was to develop a methodology for the incorporation of sociological factors into agricultural research and to apply that methodology as a way of contributing to agricultural development in the Dominican Republic. The main emphasis was put on a survey to inventory farmers' knowledge, practices, production conditions, and constraints, with respect to two crops, cassava and rice.

Standard sociological methods were used (e.g. case studies and surveys), and great attention was paid to the design and performance of adaptive trials, i.e., trials taking small-farmer production conditions into account and carried out in close collaboration with farmers. Additional studies concerned the role of women and the functioning of extension services.

Map of the Research sites where the adaptive agricultural research has worked.

The Philippines

The Role of Social Anthropology/Sociology in Agricultural Research, 1982-1986 The Wageningen - IRRI Program

(including a printed guide)

47 reports

16 microfiches (positive silver halide)

Order number: KD-3515/1

Between April 1983 and July 1986 a joint research program was implemented by three institutions, i.e., the Department of Rural Sociology of the Tropics and Subtropics of the Wageningen Agricultural University (ASNW), the International Rice and Research Institute (IRRI), and the Royal Institute of the Tropics (KIT), The Netherlands.

The general objective of this program was to find out how sociologists/cultural anthropologists could perform a useful function in agricultural research stations. The program undertaken with a national research institute in the Dominican Republic was carried out by the Philippine program group together with an international agricultural research institute. In the Philippines the main objective of the research program was to provide guidelines showing how sociology could contribute to the methodology for research concerning on-farm cropping systems as developed by the IRRI.

During this period special attention was given to some methodological aspects, such as the role of case studies and their relation to surveys required to arrive at quantitative output. Another issue was how to develop simple models on the basis of which farmers' behaviour could be predicted.

Bibliography of Agricultural Bibliographies 1960 -1977

80,000 titles
222 microfiches (positive silver halide)
Order number: K-8036/1

Compiled since 1961 by the Agricultural University, Wageningen, with the assistance of the US National Agricultural Library, this bibliography has become a card file with 80,000 titles (up to 1977) and is only available on microfiche.

The microfiche edition is a major bibliographical tool for all libraries covering the fields of agriculture and the life sciences, and supplements the two earlier handbooks, i.e., Lauche's *Internationales Handbuch der Bibliographie des Landbaues* (1957) and *The Literature of Agricultural Research* by Blanchard & Ostvold (1958).

The titles are arranged systematically.
